THE COMPANY.

Founded in 2002, Purchased and Revived in 2015, Australian owned and designed brand Linebreak is internationally recognised as a leading producer of world class compression garments. Our aim is to assist amateur and professional athletes to make the improvements necessary to achieve their goals by providing vital assistance and support during the recovery and performance.

Linebreak's passion for sport, coupled with a clear understanding of the commitment and dedication required to succeed at an elite level is the benchmark from which we commence all steps from designing of the brand and product through to the service and requirements of the modern athlete.

Continual research and development, our teams source and test the latest products, fabrics and technologies from a host of mills and research facilities around the world.

Our Motto "PERFORM. PROTECT. RECOVER" is central to the organisations core values and highlights our determination to produce a world class product that will deliver the right results before, during and after competition.

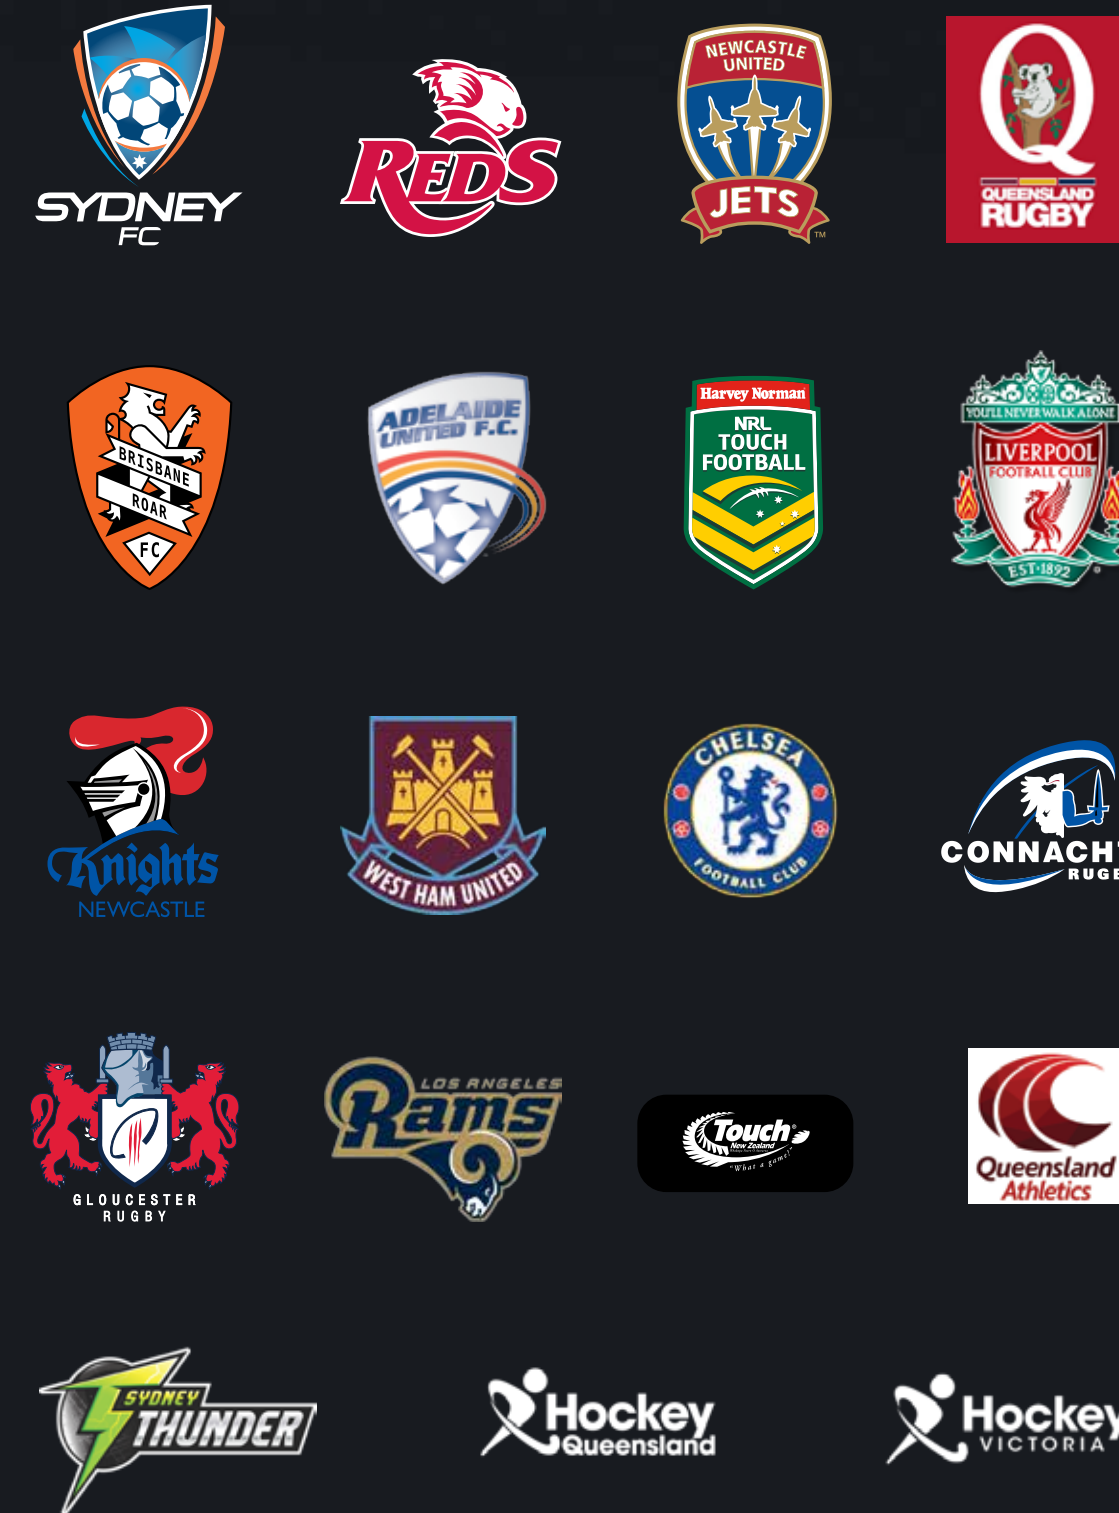

Not all compression garments are created equal. At Linebreak we are focused on educating, empowering and providing the right tools to industry professionals and participants globally, enabling them to maximise their potential through the correct use of true sports compression garments.

Linebreak is a supplier to amateur, representative and professional athletes and teams, clubs and associations around the world. How do you recover?

For more information, please visit linebreak.com.au

PERFORM . PROTECT . RECOVER

PROUDLY SUPPLYING.

Joe Pitt

Training and performance benefits including reduced muscle vibration, UV protection and temperature control assist players on the park. Off the park following performance or during extended plane and bus travel players utilize Linebreak compression garments and calf socks to assist venous and lymphatic return and to generally aid the recovery process.

I would like to personally thank Linebreak for their partnership with Sydney FC and genuinely hope it is a long and successful association.

Andrew Clark, Head of Sport Science/Football Conditioning Sydney FC

'Linebreak compression garments help our athletes perform at their best on the field as well as playing a crucial role for their recovery off the field. Linebreak's technology continues to play a part in maintaining Australia's number one international ranking!'

Wayne Grant, TFA High Performance Manager

'Linebreak compression garments are a simple and effective recovery tool.'

John Fearn, Head physiotherapist Chelsea Football Club.

'Linebreak provide Compression garments that afford many benefits, including incredible support to working muscles for faster and improved recovery times though the demands of a Super Rugby season; which assist in keeping our players on the field.'

Damian Marsh - Head of Athletic Performance, St. George Queensland Reds

“The physical demands of training and matches make recovery an essential part of our football program. Linebreak Compression Garments play an integral role in our recovery protocol; ensuring our athletes can perform at their maximum on daily basis. We are very pleased to have Linebreak as the official Compression supplier for the Newcastle Jets Football Club.”

Justin Dougherty - Head Physiotherapist - Newcastle Jets Football Club

“Linebreak compression garments are a critical component in our planning for elite athletic performance. They offer us a range of compression options which are beneficial for on-field performance, post- game recovery as well as travel comfort and circulation.”

Greg King – High Performance Manager Adelaide United Football Club

COMPRESSION EXPLAINED.

Here's a brief explanation of how compression works. Applying graded compression to working muscles improves blood circulation and that has many benefits.

Linebreak compression gets oxygen rich blood from your heart to your muscles faster which means they perform better. Getting fresh blood into the muscle means getting nasty by-products out, for example - lactic acid. This is one-way compression Improves your Performance.

So now you've got working muscles getting fresh blood supplied for better performance! But what about Recovery? Again, getting oxygen rich blood to tired muscles is the key. Like a massage, Linebreak compression promotes better blood flow to traumatized muscles. Better blood flow means faster and more effective recovery to the muscle cells. It's recommended they be worn for a couple of hours after exercise for maximum benefit.

Besides circulation, Linebreak compression can reduce your risk of injury and extend your endurance by supporting your muscles.

Visualize a super-slow-mo. video of a runner's foot striking the ground. Imagine the downward shockwave through the thigh followed by a reverberation of the shock as the quad bounces back up. All this violence causes the muscle fibres to tear.

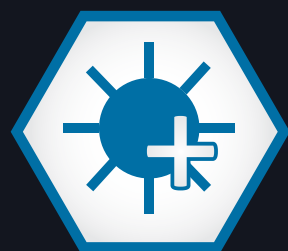

Don't panic, this is the natural degradation of muscles that lead to fatigue. What Linebreak compression does is to act like a firm set of hands gently holding the muscle in place to reduce the shock.

The better you can do that, the less damage you cause and the longer you can go for. Also, you will have caused less damage to recover from. This benefit applies to all working muscles and isn't limited to just legs.

As if all that wasn't reason enough, Linebreak garments also Control Your Body Temperature in hot and cold conditions. When you sweat in the heat, our fabric draws the sweat to the surface of the garment and spreads it over the entire garment to increase your evaporation surface area. The bigger that area is, the more efficiently you'll be cooled (a bit like having a cool flannel over you on a hot night).

In the cold, this evaporation means you'll dry quickly if you sweat and when you're dry, the undergarment helps keep your warmth in. Besides being comfortable, a regulated body temperature conserves energy for your sport - energy that would have otherwise been used fighting temperature fluctuations.

UV PROTECTION.

Linebreak compression garments have a UV protection of 30+, protection from the sun is important, we do encourage you to use sunscreen protection at all times.

MOISTURE CONTROL.

Sweat is your body's way of regulating your body temperature. Moisture wicking is in all of our Linebreak garments. Moisture wicking means, sweat is drawn away from your skin, so you stay dry, allows breathability. This process allows your body to regulate its temperature normally.

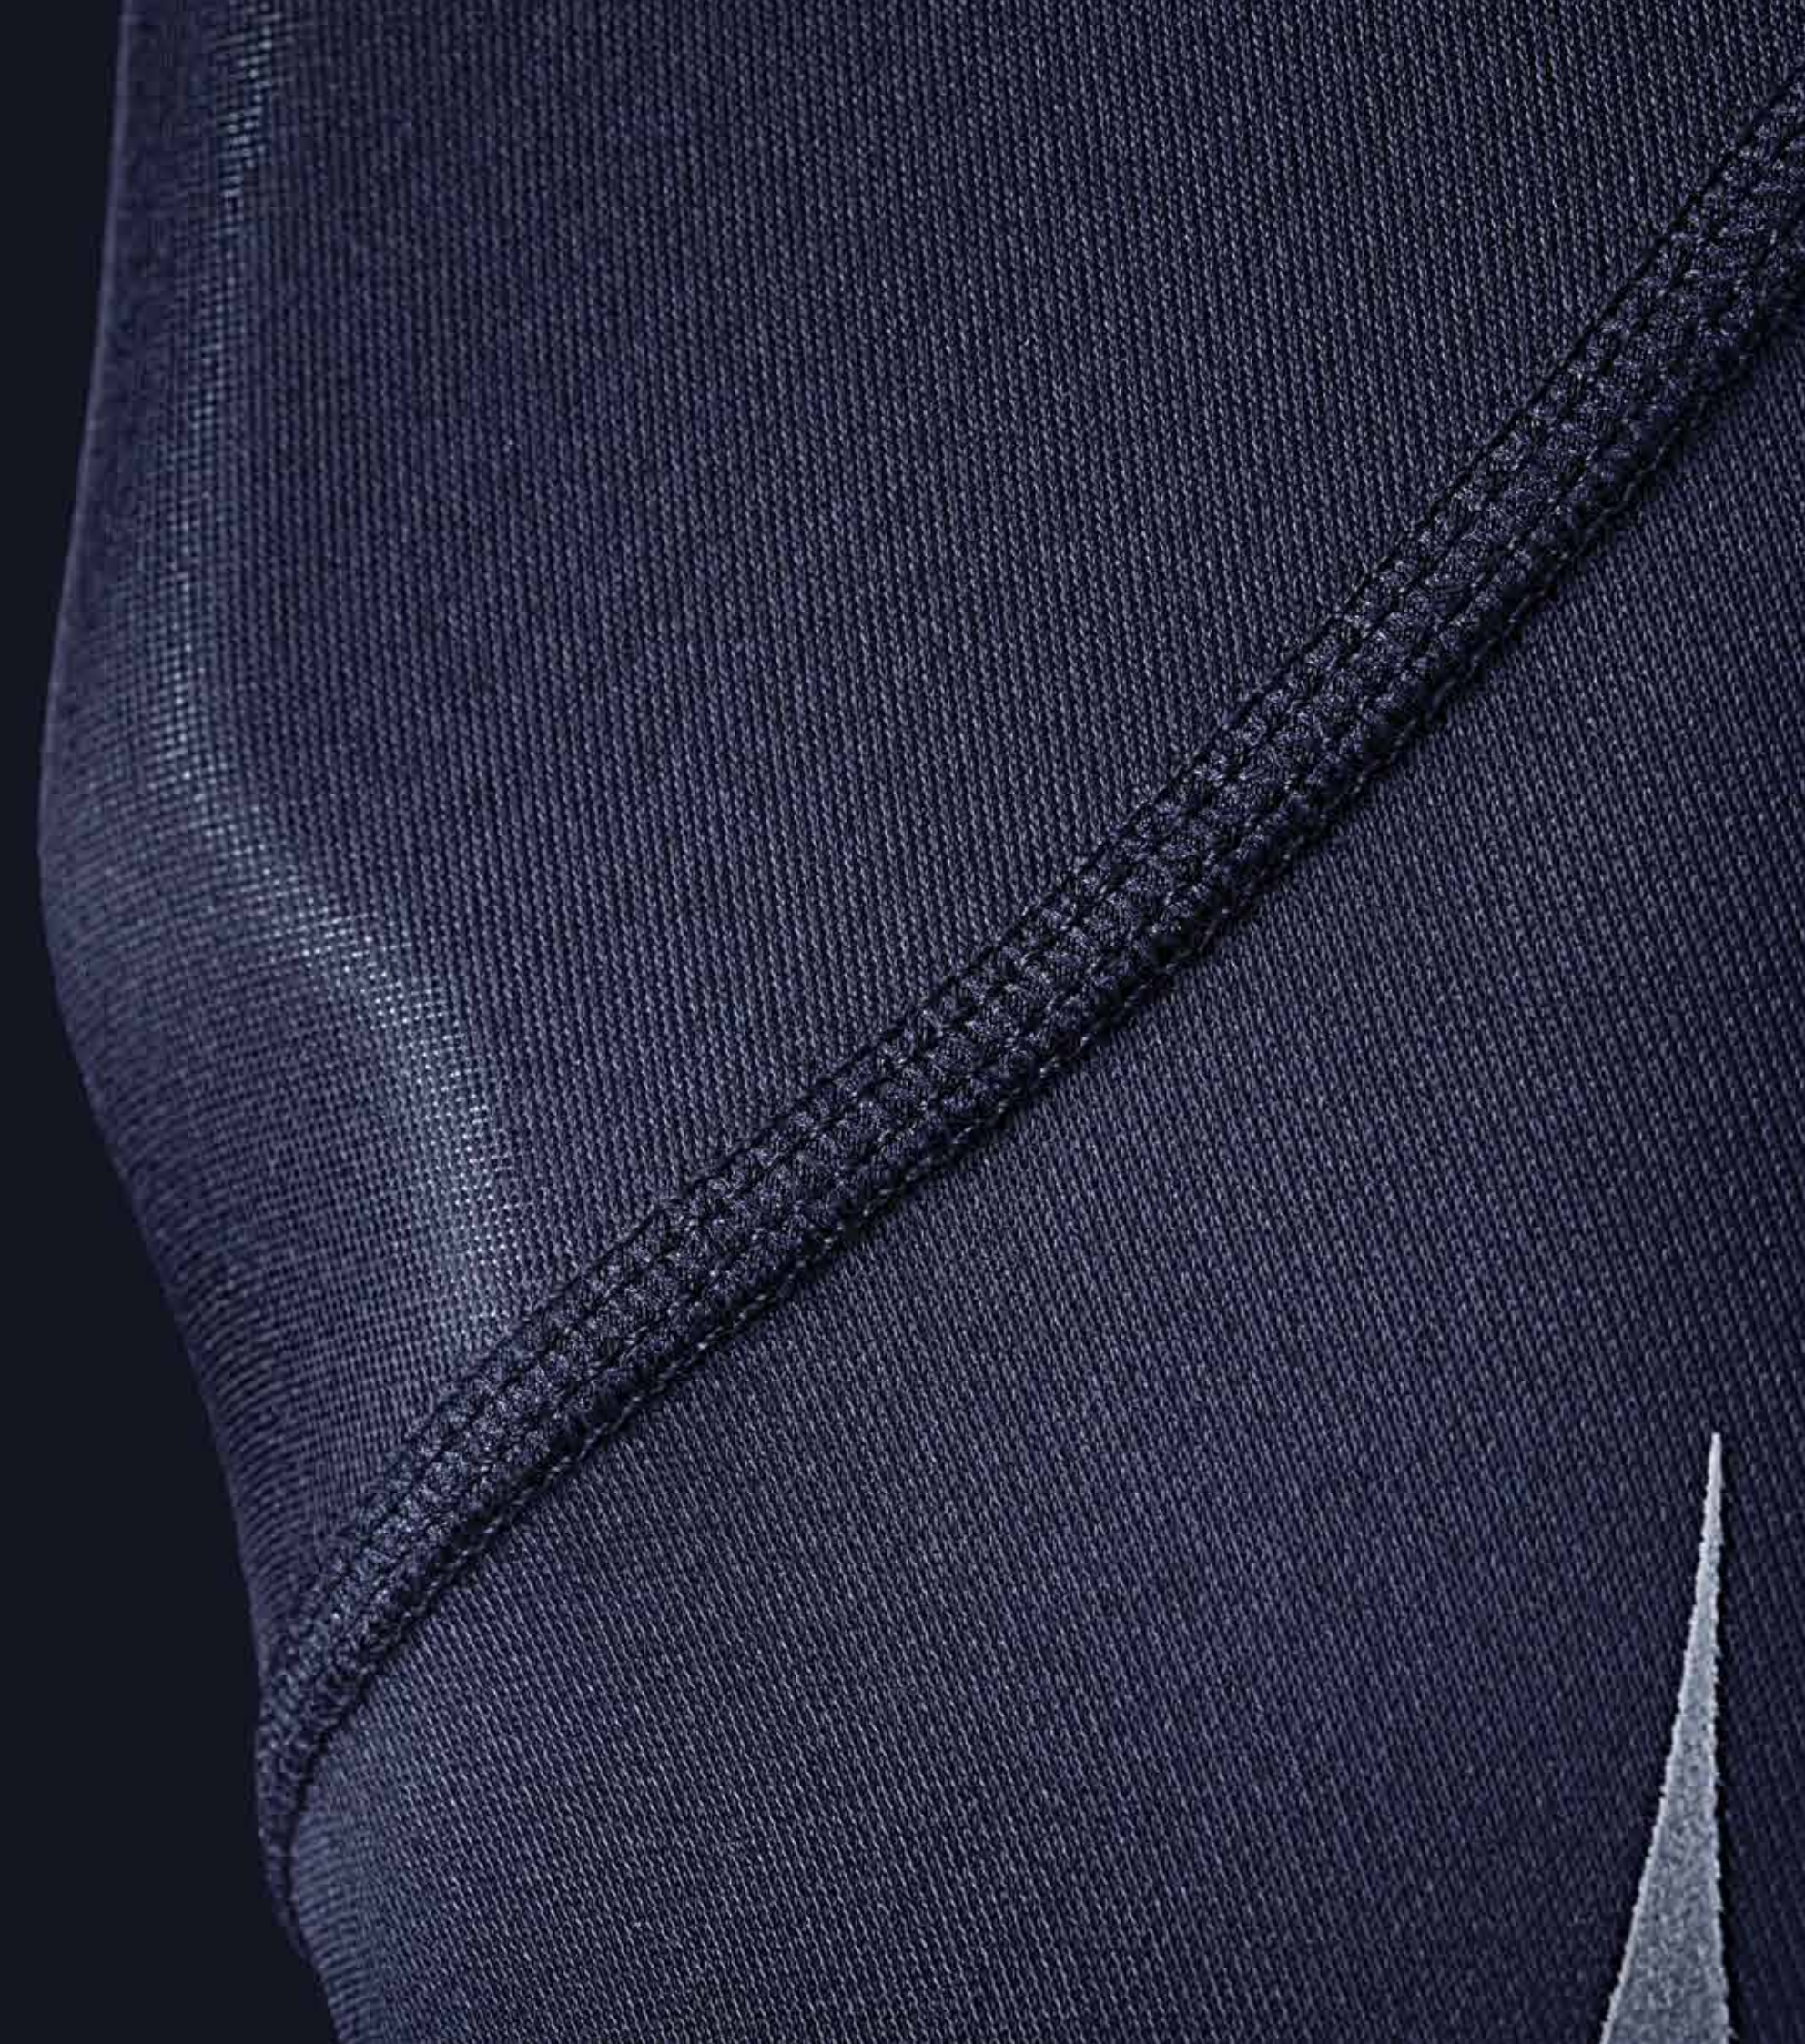

WARP KNIT.

Warp knitting is the use of multiple yarns for superior fit and performance. The use of lycra makes sure the content of elasticity helps control the compression for the ultimate performance. Warp knitting a compression product is superior to using circular knit. It allows the garment to maintain the correct level of compression.

MUSCLE SENSE.

Our garments offer natural movement. With our technically structured compression design that can help reduce the risk of injury, Linebreak compression returns to its original shape with the stress your body puts it under. Our compression supports your key muscles to reduce micro-tearing, reducing movement and focusing on direction, the seams are placed strategically to offer muscle support.

BENEFITS

- Enhances your everyday performance
- Muscle Sense Muscular support technology
- Promotes better blood flow to traumatized muscles
- Extends your endurance by supporting your muscles
- Regulates your body temperature
- Flatlock seams to reduce chafing
- Reduced muscle injuries by restricting muscle bounce and hyper extension
- Moisture wicking fabrication for extended comfort during training
- Anti-microbial feature to reduce garment odour
- Reflective Linebreak logo for night training safety
- Knitted waistband for comfort and support

OFFICIAL COMPRESSION SUPPLIER

LINEBREAK COLLABORATION WITH CELLIANT TECHNOLOGY

WHY CELLIANT?

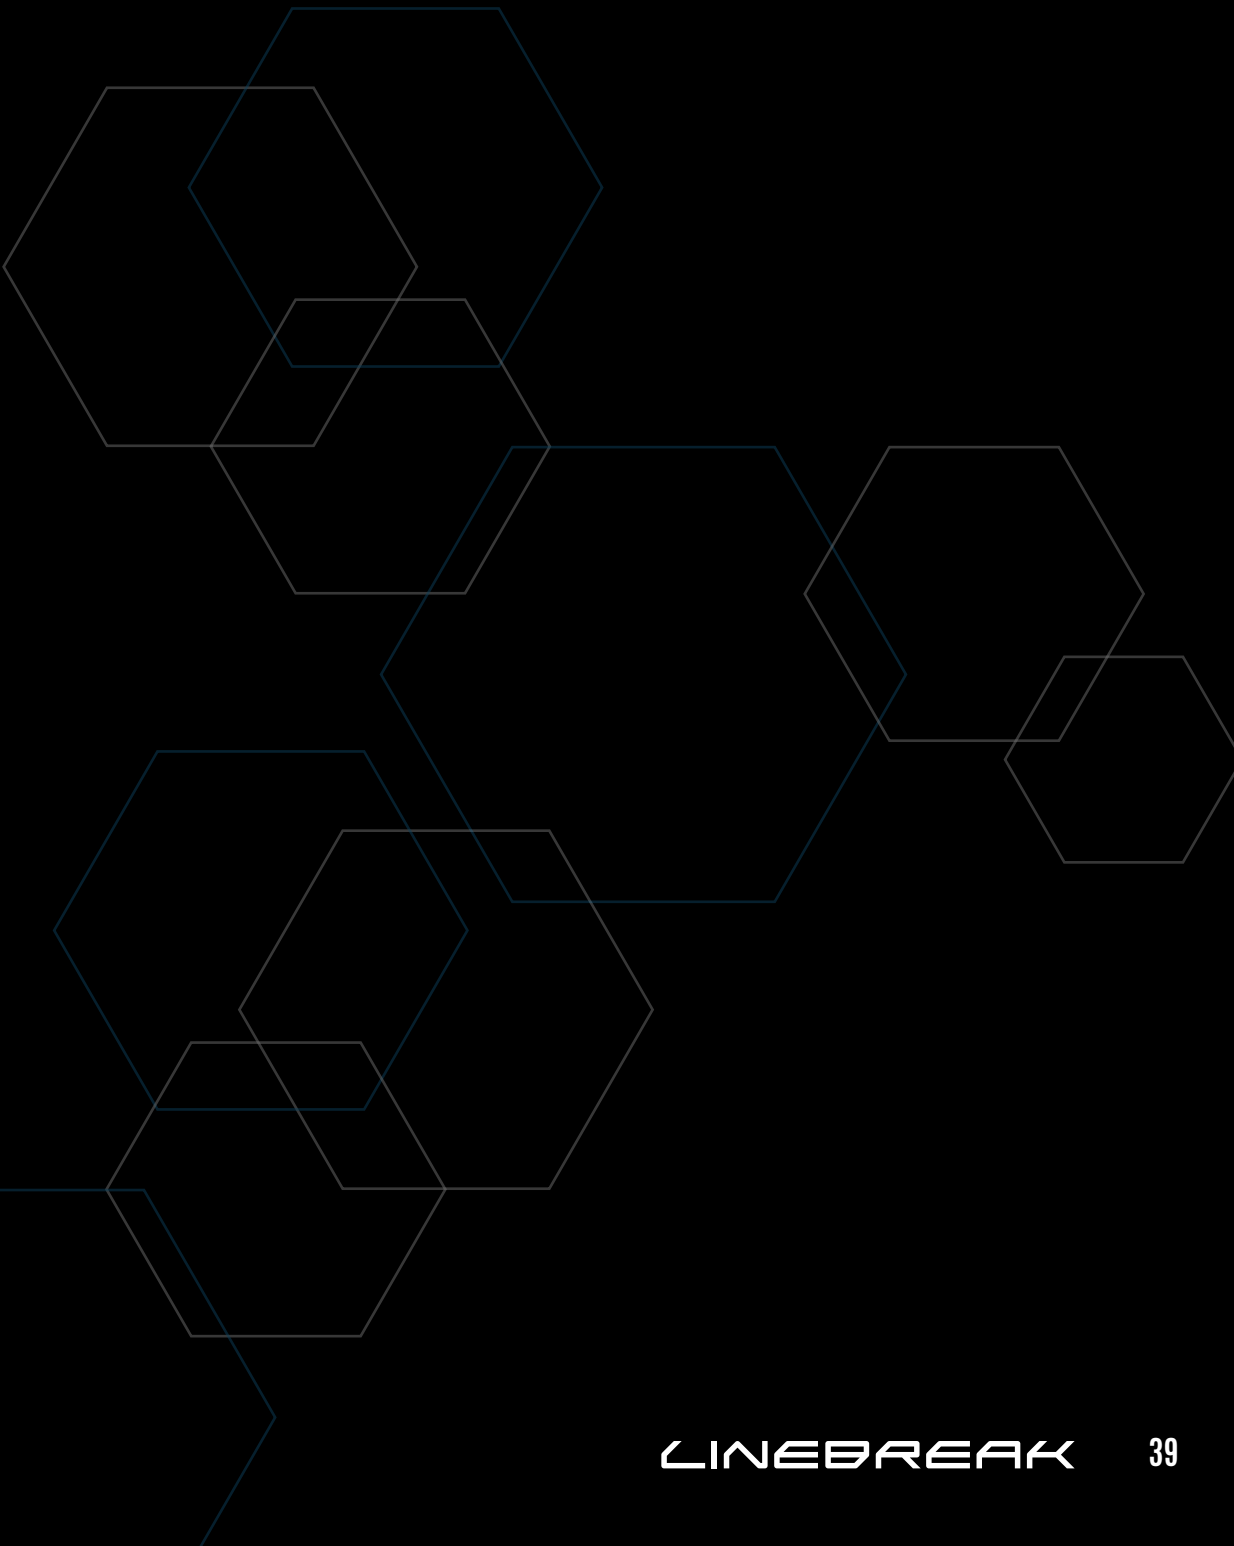

- **Celliant puts body heat back to work.**
Most other textiles either trap or vent body heat. Celliant technology goes beyond-turning wasted energy into useable energy.
- **Celliant acts as a catalyst.**
The minerals used in every fibre were selected for their thermos-reactive ability to most effectively convert body heat into infrared energy and reflect it back into the body-giving the wearer benefits down to their core. And a renewable energy source.
- **Cell performance & recovery.**
Cells grow stronger, so does your performance. The infrared energy created by Celliant stimulates cell performance and regeneration, while the increased circulation nourishes the cells with higher levels of oxygen-further promoting cell health. Enhanced cell function means injuries heal quicker, pain subsides faster and stamina and endurance are amplified.
- **Temperature regulation.**
Keep, your thermostat just how you like it. The circulatory system is also the body's heating and cooling regulator. By optimizing blood flow, Celliant makes it easier for the body to maintain its ideal temperature.
- **Overall wellbeing.**
More quality you time. People who use textiles made from Celliant report greater energy, improved quality of life and heightened sense of wellbeing.
- **Durability.**
Celliant won't wear out-or allow you to. By loading our mineral blend directly into the fiber, the effects of Celliant never diminish through washing or wear like coated textiles.
- **Circulation.**
Putting more into circulation. Infrared energy boosts the flow of blood to tissue throughout the body, delivering vital nutrients whole increasing oxygen levels.

PACKAGING

- Unique design
- Resealable Package
